# SYSMAC CJ-series CJ2H CPU Units

## Setting new standards in high-speed machine control

• Small, Fast, Flexible:

Inheriting and improving CJ1 features, the CJ2 CPU Units is the best choice for the machine control with high-speed and high-capacity.

CJ2H-CPU64

## **Features**

- Even more program memory and data memory.
- Superior high-speed control performance: LOAD instructions execute in 16 ns, SINE instructions in 0.59 μs.
- Maximum throughputs with High-speed interrupt function
- Efficient debugging through highly improved Data tracing
- Secure system from memory error brought by Memory Self-restoration Function
- The more advanced motion control by the lower cost: Synchronous Unit Operation
- Increased I/O throughput speed by Immediate refreshing instructions with direct processing.

#### Industrial automation Elincom Group European Union: www.elinco.eu Russia: www.elinc.ru

## **Ordering Information**

#### International Standards

- The standards are abbreviated as follows: U: UL, U1: UL (Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus,
- UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

## **CJ2H CPU Units**

		Specifications				nsumption A)		
Product name	I/O capacity/Mountable Units (Expansion Racks)	Program capacity	Data memory capacity	LD instruction execution time	5 V	24 V	Model	Standards
	2,560 points / 40 Units (3 Expansion Racks max.)	400K steps	832K words DM: 32K words EM: 32K words × 25 banks				CJ2H-CPU68	
CJ2H CPU Units		250K steps	512K words DM: 32K words EM: 32K words × 15 banks				CJ2H-CPU67	-
		150K steps	352K words DM: 32K words EM: 32K words × 10 banks	0.016 μs	0.42 *	-	CJ2H-CPU66	UC1, N, L, CE
		100K steps	160K words DM: 32K words EM: 32K words × 4 banks				CJ2H-CPU65	
		50K steps	160K words DM: 32K words EM: 32K words × 4 banks				CJ2H-CPU64	

\* Add 0.15 A per Adapter when using NT-AL001 RS-232C/RS-422A Adapters. Add 0.04 A per Adapter when using CJ1W-CIF11 RS-422A Adapters.

## Accessories

The following accessories come with CPU Unit:

Item	Specification			
Battery	CJ1W-BAT01			
End Cover	CJ1W-TER01 (necessary to be mounted at the right end of CPU Rack)			
End Plate	PFP-M (2 pcs)			
Serial Port (RS-232C) Connector	Connector set for serial port connection (D-SUB 9-pin male connector)			

## **General Specifications**

	Item		CJ2H-				
	item	CPU64	CPU65	CPU66	CPU67	CPU68	
Enclosure		Mounted in a panel					
Grounding		Less than 100 Ω					
CPU Rack Dimensions         90 mm × 65 mm × 49 mm (H × D × W)							
Weight		190 g or less					
Current Consumption	on	5 VDC, 0.42 A					
	Ambient Operating Temperature	0 to 55°C					
	Ambient Operating Humidity	10% to 90% (with	n no condensation)				
	Atmosphere	Must be free from corrosive gases.					
	Ambient Storage Temperature	tt Storage Temperature –20 to 70°C (excluding battery)					
	Altitude	2,000 m or less					
	Pollution Degree 2 or less: Conforms to JIS B3502 and IEC 61131-2.						
Use Environment	Noise Immunity	2 kV on power supply line (Conforms to IEC 61000-4-4.)					
	Overvoltage Category	Category II: Conforms to JIS B3502 and IEC 61131-2.					
	EMC Immunity Level	Zone B					
	Vibration Resistance	Conforms to IEC60068-2-6. 5 to 8.4 Hz with 3.5-mm amplitude, 8.4 to 150 Hz Acceleration of 9.8 m/s <sup>2</sup> for 100 min in X, Y, and Z directions (10 sweeps of 100 min total)			of 10 min each =		
	Shock Resistance		Conforms to IEC60068-2-27. 147 m/s <sup>2</sup> , 3 times in X, Y, and Z directions (100 m/s <sup>2</sup> for Relay Output Units)				
Battery	Life	5 years at 25°C					
Dattery	Model	CJ1W-BAT01					
Applicable Standard	ds	Conforms to cUL	us, NK, LR and EC	Directives.

## **Function Specifications**

	F	Functions		Description		
	Minimum Cycle Time			A minimum cycle time can be set. (0.2 to 32,000 ms; Unit: 0.1 ms) The minimum cycle time setting can be changed in MONITOR mode.		
Cycle Time Management	Cycle Time Mo	nitoring		The cycle time is monitored. (0.01 to 40,000 ms; Unit: 0.01 ms)		
	Background Pr	ocessing		Instructions with long execution times can be executed over multiple cycles to prevent fluctuations in the cycle time.		
	Basic I/O		Cyclic Refreshing	Cyclic refreshing of Basic I/O Units, Special I/O Units, and CPU Bus Units		
	Units, Special I/O Units, and	I/O Refreshing	Immediate Refreshing	I/O refreshing by immediate refreshing instructions		
	CPU Bus	Renearing	Refreshing by IORF	I/O refreshing by IORF instruction		
	Units	Unit Recogn	ition at Startup	The number of units recognized when the power is turned ON is displayed.		
		Input Respo	nse Time Setting	The input response times can be set for Basic I/O Units. The response time can be increased to reduce the effects of chattering and noise at input contacts. The response time can be decreased to enable detecting shorter input pulses.		
	Basic I/O Units	Load OFF F	unction	All of the outputs on Basic I/O Units can be turned OFF when an error occurs in RUN or MONITOR mode.		
Unit (I/O)		Basic I/O Unit Status Monitoring		Alarm information can be read from Basic I/O Units and the number of Units recognized can be read.		
Management		Unit Restart	Bits to Restart Units	A Special I/O Unit or CPU Bus Unit can be restarted.		
	Special I/O Units and CPU Bus Units	Synchronous Unit Operation		The start of processing for all the specified Units can be synchronized at a fixed interval. Maximum number of Units: 10 Units (Only Units that support Synchronous Operation Mode can be used.) Synchronous operation cycle: 0.5 to 10ms (default: 2 ms) Maximum number of words for synchronous data refreshing: 96 words (total of all Units)		
		Automatic I/O Allocation at Startup		I/O words can be automatically allocated to the Basic I/O Units that are connected in the PLC to start operation automatically without registering Units into I/O tables.		
	Configuration Management	I/O Table Creation		The current unit configuration can be registered in I/O tables to prevent it from being changed, to reserve words, and to set words.		
		Rack/Slot First Word Settings		The first words allocated to a Units on the Racks can be set.		
	Holding I/O Memory when Changing Operating Modes		hanging Operating Modes	The status of I/O memory can be held when the operating mode is changed or pow turned ON. The forced-set/reset status can be held when the operating mode is changed or power is turned ON.		
	File Memory			Files (such as program files, data files, and symbol table files) can be stored in Memory Card, EM File Memory, or Comment Memory.		
Memory Management	Built-in Flash M	lemory		The user program and Parameter Area can be backed up to an internal flash memory when they are transferred to the CPU Unit.		
	EM File Function	on		Parts of the EM Area can be treated as file memory.		
	Storing Commo	ents		I/O comments can be stored as symbol table files in a Memory Card, EM file memory, or comment memory.		
	EM Configurati	on		EM Area can be set as trace memory or EM file memory.		
	Automatic File	Transfer at S	tartup	A program file and parameter files can be read from a Memory Card when the power is turned ON.		
Memory Cards	Program Repla	cement durin	g PLC Operation	The whole user program can be read from a Memory Card to CPU Unit during operation.		
Valus	Function for Re Card	eading and W	riting Data from a Memory	Data in I/O memory in the CPU Unit can be written to a Memory Card in CSV/TXT format. Data in CSV/TXT format in the Memory Card can be read to I/O memory in the CPU Unit.		

<u> </u>	Funct	ion	Description		
Communication					
	Peripheral (USB) Port	Peripheral Bus	Bus for communications with various kinds of Support Software running on a personal computer. High-speed communications are supported.		
	Serial Port				
	Host Link (SYSWAY) Communications		Host Link commands or FINS commands placed between Host Link headers and terminators can be sent from a host computer or PT to read/write I/O memory, read/control the operating mode, and perform other operations for PLC.		
	No-protocol Communications		I/O instructions for communications ports (such as TXD/RXD instructions) can be used for data transfer with peripheral devices such as bar code readers and printers.		
	NT Link Comm	unications	I/O memory in the PLC can be allocated and directly linked to various PT functions, including status control areas, status notification areas, touch switches, lamps, memory tables, and other objects.		
	Peripheral Bus		Bus for communications with various kinds of Support Software running on a personal computer. High-speed communications are supported.		
	Serial Gateway		This gateway enables receiving and automatically converting FINS to the CompoWay/F.		
	Scheduled Interrup	pts	Tasks can be executed at a specified interval (minimum of 0.2 ms or 0.1 ms *, Unit: 0.1 ms). * When High-speed interrupt function is used.		
	Power OFF Interru	pts	A task can be executed when CPU Unit's power turns OFF.		
Interrupt	I/O Interrupt Tasks	i	A task can be executed when an input signal is input to an Interrupt Input Unit.		
	External Interrupt	Tasks	A task can be executed when interrupts are requested from a Special I/O Unit or a CPU Bus Unit.		
	High-speed Interru	pt Function	Improves performance for executing interrupt tasks with certain restrictions. (Unit version 1.1 or later.)		
	Clock Function		Clock data is stored in memory. Accuracy (Accuracy depends on the temperature.) Ambient temperature of $55^{\circ}$ C: $-3.5$ to $+0.5$ min error per month Ambient temperature of $25^{\circ}$ C: $-1.5$ to $+1.5$ min error per month Ambient temperature of $0^{\circ}$ C: $-3$ to $+1$ min error per month		
	<b>Operation Start Tir</b>	me Storage	The time when operating mode was last changed to RUN mode or MONITOR mode is store		
Clock	Operation Stop Time Storage		The last time a fatal error occurred or the last time the operating mode was changed to PROGRAM mode is stored.		
	Startup Time Storage		The time when the power was turned ON is stored.		
	Power Interruption Time Storage		The time when the power is turned OFF is stored.		
	Total Power ON Time Calculation		The total time that the PLC has been ON is stored in increments of 10 hours.		
	Power ON Clock D	ata Storage	A history of the times when the power was turned ON is stored.		
	User Program Ove	rwritten Time Storage	The time that the user program was last overwritten is stored.		
	Parameter Date St	orage	The time when the Parameter Area was overwritten is stored.		
Power	Memory Protection		Holding Area data, DM Area data, EM Area data, Counter Completion Flags, and counter present values are held even when power is turned OFF. CIO Area, Work Area, some Auxiliary Area data, and Timer Completion Flags, timer present values, index registers, and data registers can be protected by turning ON the IOM Hold Bit in the Auxiliary Area, and by also setting the IOM Hold Bit to "Hold" in the PLC Setup.		
Supply Management	Power OFF Detection Time Setting		The detection time for power interruptions can be set. AC power supply: 10 to 25 ms (variable) DC power supply: 2 to 5 ms (CJ1W-PD022) or 2 to 20 ms (CJ1W-PD025)		
	Power OFF Detect	ion Delay Time	The detection of power interruptions can be delayed: 0 to 10 ms (Not supported by the CJ1W-PD022.)		
	Number of Power	Interruptions Counter	The number of times power has been interrupted is counted.		
Function Bloc	ks		Standard programming can be encapsulated as function blocks.		
	Languages in Fund	ction Block Definitions	Ladder programming or structured text		
	Online Editing		The program can be changed during operation (in MONITOR or PROGRAM mode), except for block programming areas.		
	Force-Set/Reset		Specified bits can be set or reset. Force-set/reset to the EM Area is enabled by specifying a start bank in parameter setting. (unit version 1.2 or higher)		
	Differentiate Monit	oring	ON/OFF changes in specified bits can be monitored.		
Debugging	Data Tracing		<ul> <li>The specified I/O memory data can be stored in the trace memory in the CPU Unit. The triggers can be set.</li> <li>The trace data can be uploaded during data tracing using CX-Programmer, which enables continuously logging the data by constantly uploading the trace data (trace data uploading during tracing).</li> <li>Data tracing can be automatically started when operation is started (i.e., when the operating mode is changed from PROGRAM mode to MONITOR or RUN mode).</li> </ul>		
	Storing Location o	f Error when an Error Occurs	The location and task number where execution stopped for a program error is recorded.		
	Storing Location of Error when an Error Occurs Program Check		The programs can be checked for items such as no END instruction and FALS/FAL errors at		

	Funct	tion	Description
			A function is provided to store predefined error codes in CPU Unit, error information, and time
	Error Log		at which the error occurred.
	CPU Error Detection	on	CPU Unit WDT errors are detected. Errors can be generated for user-specified conditions: Non-fatal errors (FAL) and fatal errors
	User-defined Failure Diagnosis		(FALS). Program section time diagnosis and program section logic diagnosis are supported (FPD
			instruction).
	Load OFF Function	n	This function turns OFF all outputs from Output Units when an error occurs. The RUN output from the CJ1W-PA205R turns ON while CPU Unit is in RUN mode or
	RUN Output		MONITOR mode.
		ort-circuit Detection	This function provides alarm information from Basic I/O Units that have load short-circuit protection.
	Failure Point Dete	ction	The time and logic of an instruction block can be analyzes using the FPD instruction. This function indicates when the CPU Unit is on standby because all Special I/O Units and
	CPU Standby Dete	ction	CPU Bus Units have not been recognized at the startup in RUN or MONITOR mode.
		System FAL Error Detection (User-defined non-fatal error)	This function generates a non-fatal (FAL) error when the user-defined conditions are met in program.
		Duplicate Refreshing Error Detection	This function detects an error when an immediate refreshing Instruction in an interrupt task is competing with I/O refreshing of a cyclic task.
		Basic I/O Unit Error Detection	This function detects the errors in Basic I/O Units.
		Backup Memory Error Detection	This function detects errors in the memory backup of the user programs and parameter area (backup memory).
		PLC Setup Error Detection	This function detects setting errors in the PLC Setup.
	Non-fatal Error Detection	CPU Bus Unit Error Detection	This function detects an error when there is an error in data exchange between the CPU Unit and a CPU Bus Unit.
		Special I/O Unit Error Detection	This function detects an error when there is an error in data exchange between the CPU Unit and a Special I/O Unit.
		Battery Error Detection	This function detects an error when a battery is not connected to the CPU Unit or when the battery voltage drops.
		CPU Bus Unit Setting Error Detection	This function detects an error when the model of a CPU Bus Unit in the registered I/O tables does not agree with the model that is actually mounted in the PLC.
		Special I/O Unit Setting Error Detection	This function detects an error when the model of a Special I/O Unit in the registered I/O tables does not agree with the model of Unit that is actually mounted.
Self-		Memory Error Detection	This function detects errors that occur in memory of the CPU Unit.
diagnosis and Restoration		I/O Bus Error Detection	This function detects when an error occurs in data transfers between the Units mounted in Rack slots and the CPU Unit and detects when the End Cover is not connected to the CPU Rack or an Expansion Rack.
		Unit/Rack Number Duplication Error	This function detects an error when the same unit number is set for two or more Units, the same word is allocated to two or more Basic I/O Units, or the same rack number is set for two or more Racks.
		Too Many I/O Points Error Detection	This function detects an error when the total number of I/O points set in the I/O tables or the number of Units per Rack exceeds the specified range.
		I/O Setting Error Detection	This function detects an error when the number of Units in the registered I/O tables does not agree with the actual number of Units that is mounted, or an Interrupt Unit has been connected in the wrong position, i.e., not in slot 0 to 4.
		Program Error Detection	This function detects errors in programs.
		Instruction Processing Error Detection	This function detects an error when the given data value is invalid when executing an instruction, or execution of instruction between tasks was attempted.
	Fatal Error Detection	Indirect DM/EM BCD Error Detection	This function detects an error when an indirect DM/EM address in BCD mode is not BCD.
		Illegal Area Access Error Detection	This function detects an error when an attempt is made to access an illegal area with an instruction operand.
		No END Error Detection	This function detects an error when there is no END instruction at the end of the program.
		Task Error Detection	This function detects an error when there are no tasks that can be executed in a cycle, there is no program for a task, or the execution condition for an interrupt task was met but there is no interrupt task with the specified number.
		Differentiation Overflow Error Detection	This function detects an error when too many differentiated instructions are entered or deleted during online editing (131,072 times or more).
		Invalid Instruction Error Detection	This function detects an error when an attempt is made to execute an instruction that is not defined in the system.
		User Program Area Overflow Error Detection	This function detects an error when instruction data is stored after the last address in user program area.
		Cycle Time Exceeded Error Detection	This function monitors the cycle time (10 to 40,000 ms) and stops the operation when the set value is exceeded.
	Fatal Error	System FALS Error Detection (User-defined Fatal Error)	This function generates a fatal (FALS) error when the user-defined conditions are met in program.
	Detection (Continued from	Version Error Detection	This function detects an error when a user program includes a function that is not supported by the current unit version.
	previous page)	Memory Card Transfer Error Detection	This function detects an error when the automatic file transfer from Memory Card fails at startup.
	Memory Self-resto	ration Function	This function performs a parity check on the user program area and self-restoration data.

	Function		Description
	Simple Backup Function		This function collectively backs up the data in CPU Unit (user programs, parameters, and I/O memory) and internal backup data in the I/O Units.
	Unsolicited Communications		A function that allows the PLC to use Network Communications Instruction to send required FINS commands to a computer connected via a Host Link
Maintenance	enance Remote Programming and Monitoring		Host Link communications can be used for remote programming and remote monitoring through a Controller Link, Ethernet, DeviceNet, or SYSMAC LINK Network. Communications across network layers can be performed. Controller Link or Ethernet: 8 layers DeviceNet or SYSMAC LINK: 3 layers
	Automatic Online Connection via Network Direct Connection		This function enables automatically connecting to the PLC online when the CX-Programmer is directly connected by a serial connection (peripheral (USB) port or serial port).
	Read Protection using Password		This function protects reading and displaying programs and tasks using passwords. Write protection: Set using the DIP switch. Read protection: Set a password using the CX-Programmer.
Saguritu	FINS Write Protection		This function prohibits writing by using FINS commands sent over the network.
Security	Unit Name Function		This function allows the users to give any names to the Units. Names are verified at online connection to prevent wrong connection
	Hardware ID Using Lot Numbers		This function sets operation protection by identifying hardware using the user programs according to lot numbers stored in the Auxiliary Area.

## **Unit Versions**

Units	Models	Unit version
		Unit version 1.4
CJ2H CPU Units	CJ2H-CPU6□	Unit version 1.3
CJ2H CFO UNIS		Unit version 1.2
		Unit version 1.1 *

\* Although the product of unit version 1.0 does not exist for the CJ2H CPU unit (CJ2H-CPU6), this unit version 1.1 means that the functions are added based on the same functionality as CJ2H-CPU6-EIP unit version 1.0.

## **Function Support by Unit Version**

### **Unit Version 1.4 or Later**

CX-Programmer version 9.3 or higher must be used to enable using the functions added for unit version 1.4.

Unit	CJ2H CPU Unit		
Model	CJ2H-CPU6□		
Unit version	Unit version 1.4 or higher	Unit version 1.3 or earlier	
Synchronous unit operation function Position Control Units with EtherCAT interface CJ1W-NC 82 work for synchronous unit operation.	Supported.	Not supported.	

## Unit Version 1.3 or Later

CX-Programmer version 9.1 or higher must be used to enable using the functions added for unit version 1.3.

	Unit	CJ2H CPU Unit		
	Model	CJ2H-(	CPU6	
Item	Unit version	Unit version 1.3 or later	Unit version 1.2 or earlier	
Special instructions for certain	CJ1W-NC281/NC481/NC881 Position Control Units: PCU HIGH-SPEED POSITIONING (NCDMV(218))	Supported.	Not supported.	
Special I/O Units	CJ1W-NC281/NC481/NC881 Position Control Units: PCU POSITIONING TRIGGER (NCDTR(219))	Supported.	Not supported.	
New special instructions	SIGNED AREA RANGE COMPARE: ZCPS(088)	Supported.	Not supported.	
New special instructions	DOUBLE SIGNED AREA RANGE COMPARE: ZCPSL(116)	Supported.	Not supported.	

#### **Unit Version 1.2 or Later**

CX-Programmer version 8.3 or higher must be used to enable using the functions added for unit version 1.2.

Unit	CJ2H CPU Unit		
Model	CJ2H-CPU6□		
Unit version	Unit version 1.2 or higher	Unit version 1.1 or earlier	
EM force-set/reset function	Supported.	Not supported.	

Note: User programs that use functions of CJ2H CPU Units with unit version 1.2 or later cannot be used with CJ2H CPU Units with unit version 1.1 or earlier. If an attempt is made to transfer a program that uses any of these functions from the CX-Programmer to a CPU Unit with unit version 1.1 or earlier , an error will be displayed and it will not be possible to download to the CPU Unit.

#### **Unit Version 1.1 or Later**

CX-Programmer version 8.1 or higher must be used to enable using the functions added for unit version 1.1.

Note: Although the product of unit version 1.0 does not exist for the CJ2H CPU unit (CJ2H-CPU6\_), it describes here assuming that the functions are added with unit version 1.1 to the unit version 1.0 functions as well as CJ2H-CPU6\_-EIP.

Unit	CJ2H CPU Unit
Model	CJ2H-CPU6□
Unit version	Unit version 1.1 or higher
High-speed interrupt function Decreased overhead time for interrupt tasks Minimum interval setting of 0.1 ms for Scheduled Interrupt Task	Supported.
Changing the minimum cycle time setting in MONITOR mode	Supported.
Synchronous unit operation function Position Control Units (High-speed type) CJ1W-NC□□4 work for synchronous unit operation.	Supported.
Addition of Immediate refreshing instruction only for specific Special I/O Units and CPU Bus Units For CJ1W-AD042 : Analog Input Direct Convert AIDC (216) For CJ1W-DA042V : Analog Output Direct Convert AODC (217) For CJ1W-SCU22/32/42 : Direct Receive Via Serial Communications Unit DRXDU (261) Direct Transmit Via Serial Communications Unit DTXDU (262)	Supported.

## **Unit Versions and Programming Devices**

The following tables show the relationship between unit versions and CX-Programmer versions.

#### **Unit Versions and Programming Devices**

			Required Programming Device						
CPU Unit	Functions		CX-Programmer					Programming	
			Ver. 7.1 or Iower	Ver.8.0	Ver.8.1/ Ver.8.2	Ver. 8.3	Ver. 9.1/9.2	Ver. 9.3 or higher	Console
CJ2H-CPU6 Unit version 1.4	Functions	Using new functions	-	-	-	-	-	OK	
	Not using new functions	-	OK *1	OK *1	ОК	ОК	ОК		
	added for unit	Using new functions	-	-	-	-	OK	OK	
		Not using new functions	_	OK <b>%</b> 1	OK *1	ОК	ОК	ОК	**2
CJ2H-CPU6□	Functions	Using new functions	-	-	-	OK	OK	OK	- *3
Unit version 1.2	added for unit version 1.2	Not using new functions	-	OK <b>*</b> 1	OK *1	ОК	ОК	ок	
CJ2H-CPU6 Unit version 1.1	Functions added for unit version 1.1	Using new functions	-	-	OK *2	OK	OK	OK	
		Not using new functions	_	-	ОК	ОК	ОК	ОК	

\*1. It is not necessary to upgrade the version of the CX-Programmer if functionality that was enhanced for the upgrade of the CPU Unit will not be used.
 \*2. CX-Programmer version 8.2 or higher is required to use CJ2 CPU Units (CJ2H-CPU6). However the functions of unit version 1.0 and only High-speed interrupt function and Changing the minimum cycle time setting in MONITOR mode are supported in CX-Programmer version 8.02.
 \*3. A Programming Console cannot be used with a CJ2H CPU Unit.

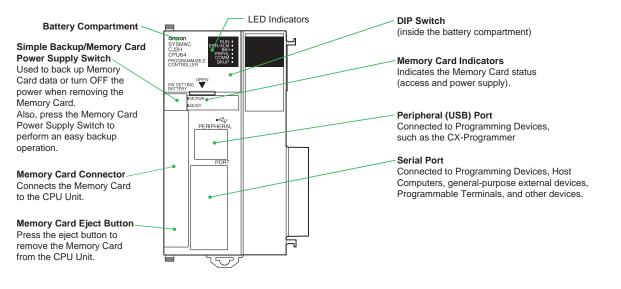

#### **Device Type Setting**

The unit version does not affect the setting made for the device type on the CX-Programmer. Select the device type as shown in the following table regardless of the unit version of the CPU Unit.

Series	CPU Unit group	CPU Unit model	Device type setting on CX-Programmer Ver. 8.0 or higher
CJ Series	CJ2H CPU Units	CJ2H-CPU6□	CJ2H

## **External Interface**

A CJ2H CPU Unit (CJ2H-CPU6) provides two communications ports for external interfaces: a peripheral (USB) port and a serial port.

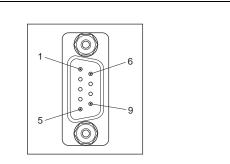

#### Peripheral (USB) Port

Item	Specification		
Baud Rate	2 Mbps max.		
Transmission Distance	5 m max.		
Interface	USB 2.0-compliant B-type connector		
Protocol	Peripheral Bus		

#### Serial Port

Item	Specification
Communications method	Half duplex
Synchronization Start-stop	
Baud rate 0.3/0.6/1.2/2.4/4.8/9.6/19.2/38.4/57.6/115.2 kbps *	
Transmission distance 15 m max.	
Interface EIA RS-232C	
Protocol	Host Link, NT Link, 1:N, No-protocol, or Peripheral Bus

\* Baud rates for the RS-232C are specified only up to 19.2 kbps. The CJ Series supports serial communications from 38.4 kbps to 115.2 kbps, but some computers cannot support these speeds. Lower the baud rate if necessary.

Pin No. Signal Na		Name	Direction
1	FG	Protection earth	-
2	SD (TXD)	Send data	Output
3	RD (RXD)	Receive data	Input
4	RS (RTS)	Request to send	Output
5	CS (CTS)	Clear to send	Input
6	5 V	Power supply	-
7	DR (DSR)	Data set ready	Input
8	ER (DTR)	Data terminal ready	Output
9	SG (0 V)	Signal ground	-
Connector hood	FG	Protection earth	-

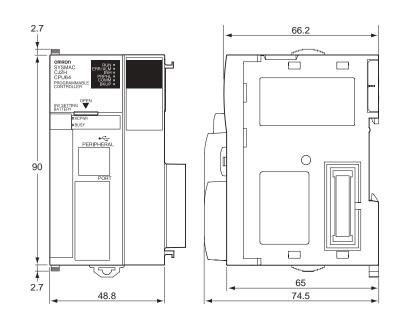

Note: Do not use the 5-V power from pin 6 of the RS-232C port for anything but CJ1W-CIF11 RS-422A Conversion Adapter, NT-AL001 RS-232C/ RS-422A Conversion Adapter and NV3W-M□20L Programmable Terminal. The external device or the CPU Unit may be damaged.

#### **Read and Understand This Catalog**

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

#### Warranty and Limitations of Liability

#### WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

#### LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

#### **Application Considerations**

#### SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the products.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- · Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this catalog.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- · Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCTS ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

#### **PROGRAMMABLE PRODUCTS**

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

#### Disclaimers

#### CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the products may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

#### DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

#### PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

#### ERRORS AND OMISSIONS

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

#### 2012.7

In the interest of product improvement, specifications are subject to change without notice.
