# SYSMAC CJ-series CJ2M CPU Units CJ2M-CPU3 /-CPU1

CSM\_CJ2M-CPU3\_\_-CPU1\_DS\_E\_1\_1

# Since 2001, CJ1M-series PLCs are in control of a wide variety of applications worldwide.

The accumulated experience and advancements in technology now result in CJ2M; fully compatible, yet fully new.

- Increased performance, and increased memory capacity
- Up to 40 I/O units on any CPU
- USB for plug-and-play access to the PLC
- All models available with or without Ethernet port
- Choice of serial port plug-in modules
- User-friendly programming, faster debugging

CJ2M-CPU3

CJ2M-CPU1

## Features

- Five variations in program capacity from 5K steps to 60K steps; scale the CPU to your application needs.
- Faster processors; logic instruction execution time is reduced to 40 ns, floating point trigonometrics in less than 1  $\mu$ s.
- Faster Function Block calls and execution, faster interrupt handling, less overhead time.
- Added execution memory for Function Blocks allows structured, object-oriented programming even in entry-level CPUs.
  General-purpose Ethernet port supports EtherNet/IP tag-based data links, connection to Support Software, communications between PLCs, FTP data transfers, and more (CJ2M-CPU3<sup>(1)</sup>).
- Standard USB port on all models allows Support Software to connect directly through standard USB cable.
- A Serial Option Module can be mounted to add RS-232C or RS-422A/485 communications ports (CJ2M-CPU3<sup>-</sup>).
- Compatible with all existing CJ1 power supply-, I/O-, control- and communication units.

Industrial automation Elincom Group European Union: www.elinco.eu Russia: www.elinc.ru

## **Ordering Information**

## International Standards

- The standards are abbreviated as follows: U: UL, U1: UL (Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus,
- UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

## CJ2M CPU Units (Built-in EtherNet/IP)

		Specifications				Current consumption (A)				
Product name	I/O capacity/ Mountable Units (Expansion Racks)	Program capacity	Data memory capacity	LD instruction execution time	EtherNet/IP function	Option board slot	5 V	24 V	Model	Standards
CJ2M (Built-in		n 60K steps 160K words (DM: 32K words,					CJ2M-CPU35			
EtherNet/IP) CPU Units	2,560 points/	30K steps	EM: 32K words × 4 banks)			YES (	0.7 (See note.)	_	CJ2M-CPU34	UC1, CE
	40 Units (3 Expansion Racks max.)	40 Units 20K steps	160K words	0.04 μs	μs YES				CJ2M-CPU33	
Í		10K steps	(DM: 32K words, EM: 32K words ×						CJ2M-CPU32	
		5K steps	1 bank)	1 bank)					CJ2M-CPU31	

Note: Add 0.005A, 0.030A and 0.075A when using Serial Communications Option Boards (CP1W-CIF01/11/12), respectively.

## **CJ2M CPU Units**

	Specification			ns				rent otion (A)	_	
Product name	duct name I/O capacity/ Mountable Units (Expansion Racks)		Data memory capacity	LD instruction execution time	EtherNet/IP function	Option board slot	5 V	24 V	Model	Standards
	2 560 points/	60K steps	160K words (DM: 32K words,						CJ2M-CPU15	
CJ2M CPU Units		2 560 points/	2,560 points/ BM: 32K words × 4 banks)	 0.04 μs				_	CJ2M-CPU14	
<b>1</b>	40 Units (3 Expansion	20K steps	160K words			_	0.5 (See note.)		CJ2M-CPU13	UC1, CE
E	Racks max.)	acks max.) 10K steps [DM: 32K words, EM: 32K words x		note.)		CJ2M-CPU12				
~~~~		5K steps	1 bank)						CJ2M-CPU11	

Note: Add 0.15A when using NT-AL001 RS-232C/RS-422A Adapters. Add 0.04 A when using CJ1W-CIF11 RS-422A Adapters.

## Serial Communications Option Boards (Only CJ2M-CPU3)

The serial communications port can be equipped by installing the serial communications option board to the option board slot in front of CPU unit.

Product name	Specifications	Model	Standards
RS-232C Option Board	One RS-232C port Connector: D-Sub, 9 pin, female Maximum transmission distance: 15m One RS-232C connector (D-Sub, 9 pin, male) is included. (Plug: XM2A-0901, Hood: XM2S-0911-E)	CP1W-CIF01	UC1, N, L,
RS-422A/485 Option Board	One RS-422A/485 port Terminal block: using ferrules Maximum transmission distance: 50m	CP1W-CIF11	CE
RS-422A/485 Isolated-type Option Board	One RS-422A/485 port (Isolated) Terminal block: using ferrules Maximum transmission distance: 500m	CP1W-CIF12	N, L, CE

Note: It is not possible to use a CP-series Ethernet Option Board (CP1W-CIF41), LCD Option Board (CP1W-DAM01) with a CJ2M CPU Unit.

## Accessories

The following accessories come with CPU Unit:

Item	Specification			
Battery	CJ1W-BAT01			
End Cover	CJ1W-TER01 (necessary to be mounted at the right end of CPU Rack)			
End Plate	PFP-M (2 pcs)			
Serial Port (RS-232C) Connector (see note)	Connector set for serial port connection (D-SUB 9-pin male connector)			

Note: Connector is not provided with CJ2M-CPU3  $\square.$ 

# **General Specifications**

			CJ2M-			
	Item	CPU1	CPU3			
Enclosure		Mounted in a panel				
Grounding		Less than 100 Ω				
CPU Rack Dimensions Weight Current Consumption		90 mm × 75 mm × 31 mm	90 mm $\times$ 75 mm $\times$ 62 mm			
		130 g or less	190 g or less (see note)			
		5 VDC, 0.5 A	5 VDC, 0.7 A			
	Ambient Operating Temperature	0 to 55°C				
	Ambient Operating Humidity	10% to 90%				
	Atmosphere	Must be free from corrosive gases.				
	Ambient Storage Temperature	-20 to 70°C (excluding battery)				
	Altitude	2,000 m or less				
	Pollution Degree	2 or less: Conforms to JIS B3502 and IEC 61131-2.				
Use Environment	Noise Immunity	2 kV on power supply line (Conforms to IEC 61000-4-4.)				
Use Linvironment	Overvoltage Category	Category II: Conforms to JIS B3502 and IEC 61131-2.				
	EMC Immunity Level	Zone B				
	Vibration Resistance	Conforms to IEC60068-2-6 5 to 8.4 Hz with 3.5-mm amplitude, 8.4 to 150 Hz Acceleration of 9.8 m/s <sup>2</sup> for 100 min in X, Y, and Z directions (10 sweeps of 10 min each 100 min total)				
	Shock Resistance	Conforms to IEC60068-2-27 147 m/s <sup>2</sup> , 3 times in X, Y, and Z dire	ections (100 m/s <sup>2</sup> for Relay Output Units)			
Pottony	Life	5 years at 25°C				
Battery	Model	CJ1W-BAT01				
Applicable Standard	ls	Conforms to cULus and EC Directiv	Conforms to cULus and EC Directives.			

Note: Without a Serial Option Board.

\*5. "Packets per second" is the number of communications packets that can be processed per second.

- \*6. If the maximum number is exceeded, refreshing will require more than one CPU Unit cycle.
  \*7. When changing parameters, however, the EtherNet/IP port where the change is made will be restarted. In addition, a timeout will temporarily occur at the other node that was communicating with that port, and it will then recover automatically.
- \*8. The EtherNet/IP port supports an IGMP client, so unnecessary multicast packets are filtered by using a switching hub that supports IGMP snooping.

# **Function Specifications**

	F	unctions		Description
	Minimum Cycle	Time		A minimum cycle time can be set. (0.2 to 32,000 ms; Unit: 0.1 ms) The minimum cycle time setting can be changed in MONITOR mode.
Cycle Time Management	Cycle Time Monitoring			The cycle time is monitored. (0.01 to 40,000 ms; Unit: 0.01 ms)
	Background Processing			Instructions with long execution times can be executed over multiple cycles to prevent fluctuations in the cycle time.
	Basic I/O		Cyclic Refreshing	Cyclic refreshing of Basic I/O Units, Special I/O Units, and CPU Bus Units
	Units, Special I/O Units, and	I/O Refreshing	Immediate Refreshing	I/O refreshing by immediate refreshing instructions
	CPU Bus	rton ooning	Refreshing by IORF	I/O refreshing by IORF instruction
	Units	Unit Recog	nition at Startup	The number of units recognized when the power is turned ON is displayed.
		Input Resp	onse Time Setting	The input response times can be set for Basic I/O Units. The response time can be increased to reduce the effects of chattering and noise at input contacts. The response time can be decreased to enable detecting shorter input pulses.
	Basic I/O Units	Load OFF F	unction	All of the outputs on Basic I/O Units can be turned OFF when an error occurs in RUN or MONITOR mode.
Unit (I/O)	Units	Basic I/O Unit Status Monitoring		Alarm information can be read from Basic I/O Units and the number of Units recognized can be read.
Management		Reading/writing data using instructions for specific Units		Special instructions can be used to read/write required data for specific Units at high speed.
	Special I/O Units and CPU Bus Units Unit Restart Bits to Restart Units			A Special I/O Unit or CPU Bus Unit can be restarted.
		Automatic	/O Allocation at Startup	I/O words can be automatically allocated to the Basic I/O Units that are connected in the PLC to start operation automatically without registering Units into I/O tables.
	Configuration Management	I/O Table Creation		The current unit configuration can be registered in I/O tables to prevent it from being changed, to reserve words, and to set words.
		Rack/Slot First Word Settings		The first words allocated to a Units on the Racks can be set.
	Holding I/O Memory when Changing Operating Modes			The status of I/O memory can be held when the operating mode is changed or power is turned ON. The forced-set/reset status can be held when the operating mode is changed or power is turned ON.
	File Memory			Files (such as program files, data files, and symbol table files) can be stored in Memory Card, EM File Memory, or Comment Memory.
Memory Management	Built-in Flash N	lemory		The user program and Parameter Area can be backed up to an internal flash memory when they are transferred to the CPU Unit.
	EM File Functio	on		Parts of the EM Area can be treated as file memory.
	Storing Comme	ents		I/O comments can be stored as symbol table files in a Memory Card, EM file memory, or comment memory.
	EM Configurati	on		EM Area can be set as trace memory or EM file memory.
	Automatic File	Transfer at S	tartup	A program file and parameter files can be read from a Memory Card when the power is turned ON.
Memory Cards	Program Repla	cement durin	g PLC Operation	The whole user program can be read from a Memory Card to CPU Unit during operation.
Varus	Function for Re Card	ading and W	riting Data from a Memory	Data in I/O memory in the CPU Unit can be written to a Memory Card in CSV/TXT format. Data in CSV/TXT format in the Memory Card can be read to I/O memory in the CPU Unit.

	Functi	ion	Description		
Communicatio	ons		-		
	Peripheral (USB) Port	Peripheral Bus	Bus for communications with various kinds of Support Software running on a personal computer. High-speed communications are supported.		
	Serial Port (Option)	) *9	Application is possible when a Serial Communications Option Board is mounted.		
	Host Link (SYSWAY) Communications No-protocol Communications NT Link Communications		Host Link commands or FINS commands placed between Host Link headers and terminators can be sent from a host computer or PT to read/write I/O memory, read/control the operating mode, and perform other operations for PLC.		
			I/O instructions for communications ports (such as TXD/RXD instructions) can be used for data transfer with peripheral devices such as bar code readers and printers.		
			I/O memory in the PLC can be allocated and directly linked to various PT functions, including status control areas, status notification areas, touch switches, lamps, memory tables, and other objects.		
	Peripheral Bus		Bus for communications with various kinds of Support Software running on a personal computer. High-speed communications are supported.		
	Serial Gateway		This gateway enables receiving and automatically converting FINS to the CompoWay/F.		
	Serial PLC Link	S	Data is exchanged between CPU Units using serial ports without communications programming. PTs set to the 1:N NT Link protocol can be included in the network.		
	EtherNet/IP Port *1	10	100Base-TX/10Base-T Protocols: TCP/IP, UDP, ARP, ICMP (ping only), BOOTP Applications: FINS, CIP, POP3, SMTP, SNTP, DNS (Client), FTP (Server)		
	CIP	Tag Data Links	Programless cyclic data exchanges with the devices on the EtherNet/IP network.		
	Communications Service	Message Communications	Any CIP commands can be received from the devices on the EtherNet/IP network.		
	FINS Communications Service	Message Communications	Any FINS commands can be transferred with the devices on the EtherNet/IP network.		
	Scheduled Interrup	ots	Tasks can be executed at a specified interval (minimum of 0.2 ms, Unit: 0.1 ms).		
	Resetting and re	estarting with MSKS(690)	When MSKS(690) is executed, the internal timer is restarted and the time to first interrupt i set to a fixed value.		
Interrupt	Reading presen MSKS(690)	t value of internal timer with	MSKS(690) can be used to read the time that has elapsed until the schedule interrupt is started or since the previous scheduled interrupt.		
	Power OFF Interrup	ots	A task can be executed when CPU Unit's power turns OFF.		
	I/O Interrupt Tasks		A task can be executed when an input signal is input to an Interrupt Input Unit.		
	External Interrupt 1	Fasks	A task can be executed when interrupts are requested from a Special I/O Unit or a CPU Bus Unit.		
	Clock Function		Clock data is stored in memory. Accuracy (Accuracy depends on the temperature.) Ambient temperature of $55^{\circ}$ C: -3.5 to +0.5 min error per month Ambient temperature of $25^{\circ}$ C: -1.5 to +1.5 min error per month Ambient temperature of $0^{\circ}$ C: -3 to +1 min error per month		
	<b>Operation Start Tin</b>	ne Storage	The time when operating mode was last changed to RUN mode or MONITOR mode is stored.		
Clock	Operation Stop Tim	ne Storage	The last time a fatal error occurred or the last time the operating mode was changed to PROGRAM mode is stored.		
	Startup Time Stora	ge	The time when the power was turned ON is stored.		
	Power Interruption	Time Storage	The time when the power is turned OFF is stored.		
	Total Power ON Tir	ne Calculation	The total time that the PLC has been ON is stored in increments of 10 hours.		
	Power ON Clock Da	ata Storage	A history of the times when the power was turned ON is stored.		
		rwritten Time Storage	The time that the user program was last overwritten is stored.		
	Parameter Date Sto	orage	The time when the Parameter Area was overwritten is stored.		
Power	Memory Protection		Holding Area data, DM Area data, EM Area data, Counter Completion Flags, and counter present values are held even when power is turned OFF. CIO Area, Work Area, some Auxiliary Area data, and Timer Completion Flags, timer present values, index registers, and data registers can be protected by turning ON the IOM Hold Bit in the Auxiliary Area, and by also setting the IOM Hold Bit to "Hold" in the PLC Setup.		
Supply Management	Power OFF Detecti	on Time Setting	The detection time for power interruptions can be set. AC power supply: 10 to 25 ms (variable) DC power supply: 2 to 5 ms (CJ1W-PD022) or 2 to 20 ms (CJ1W-PD025)		
	Power OFF Detecti	on Delay Time	The detection of power interruptions can be delayed: 0 to 10 ms (Not supported by the CJ1W-PD022.)		
	Number of Power I	nterruptions Counter	The number of times power has been interrupted is counted.		

**\*9.** A Serial Option Board is required to use a serial port for the CJ2M-CPU3 CJ2M CPU Unit. **\*10.** Supported only by the CJ2M-CPU3.

	Func	tion	Description
Function Blo	cks		Standard programming can be encapsulated as function blocks.
	Languages in Fun	ction Block Definitions	Ladder programming or structured text
	Online Editing		The program can be changed during operation (in MONITOR or PROGRAM mode), except for block programming areas.
	Force-Set/Reset		Specified bits can be set or reset. Force-set/reset to the EM Area is enabled by specifying a start bank in parameter setting.
	Differentiate Monit	toring	ON/OFF changes in specified bits can be monitored.
Debugging	Data Tracing		The specified I/O memory data can be stored in the trace memory in the CPU Unit. The triggers can be set.
2000333			The trace data can be uploaded during data tracing using CX-Programmer, which enables continuously logging the data by constantly uploading the trace data.
	Automatically s starts	starting tracing when operation	Data tracing can be automatically started when operation is started (i.e., when the operating mode is changed from PROGRAM mode to MONITOR or RUN mode).
	Storing Location of	of Error when an Error Occurs	The location and task number where execution stopped for a program error is recorded.
	Program Check		The programs can be checked for items such as no END instruction and FALS/FAL errors at startup.
	Error Log		A function is provided to store predefined error codes in CPU Unit, error information, and time at which the error occurred.
	CPU Error Detection	on	CPU Unit WDT errors are detected.
	User-defined Failu	re Diagnosis	Errors can be generated for user-specified conditions: Non-fatal errors (FAL) and fatal errors (FALS). (FALS). Program section time diagnosis and program section logic diagnosis are supported (FPD instruction).
	Load OFF Functio	n	This function turns OFF all outputs from Output Units when an error occurs.
	RUN Output		The RUN output from the CJ1W-PA205R turns ON while CPU Unit is in RUN mode or MONITOR mode.
	Basic I/O Load Short-circuit Detection		This function provides alarm information from Basic I/O Units that have load short-circuit protection.
	Failure Point Dete	ction	The time and logic of an instruction block can be analyzes using the FPD instruction.
	CPU Standby Detection		This function indicates when the CPU Unit is on standby because all Special I/O Units and CPU Bus Units have not been recognized at the startup in RUN or MONITOR mode.
		System FAL Error Detection (User-defined non-fatal error)	This function generates a non-fatal (FAL) error when the user-defined conditions are met in program.
		Duplicate Refreshing Error Detection	This function detects an error when an immediate refreshing Instruction in an interrupt task is competing with I/O refreshing of a cyclic task.
		Basic I/O Unit Error Detection	This function detects the errors in Basic I/O Units.
0-16		Backup Memory Error Detection	This function detects errors in the memory backup of the user programs and parameter area (backup memory).
Self- diagnosis		PLC Setup Error Detection	This function detects setting errors in the PLC Setup.
and Restoration	Non-fatal Error	CPU Bus Unit Error Detection	This function detects an error when there is an error in data exchange between the CPU Unit and a CPU Bus Unit.
	Detection	Special I/O Unit Error Detection	This function detects an error when there is an error in data exchange between the CPU Unit and a Special I/O Unit.
		Tag Memory Error Detection *11	This function detects errors in tag memory.
		Battery Error Detection	This function detects an error when a battery is not connected to the CPU Unit or when the battery voltage drops.
		CPU Bus Unit Setting Error Detection	This function detects an error when the model of a CPU Bus Unit in the registered I/O tables does not agree with the model that is actually mounted in the PLC.
		Special I/O Unit Setting Error Detection	This function detects an error when the model of a Special I/O Unit in the registered I/O tables does not agree with the model of Unit that is actually mounted.
		Option Board Error Detection *11	This function detects the errors in Serial Option Board mounting status.
		Memory Error Detection	This function detects errors that occur in memory of the CPU Unit.
		I/O Bus Error Detection	This function detects when an error occurs in data transfers between the Units mounted in Rack slots and the CPU Unit and detects when the End Cover is not connected to the CPU Rack or an Expansion Rack.
	Fatal Error Detection	Unit/Rack Number Duplication Error	This function detects an error when the same unit number is set for two or more Units, the same word is allocated to two or more Basic I/O Units, or the same rack number is set for two or more Racks.
		Too Many I/O Points Error Detection	This function detects an error when the total number of I/O points set in the I/O tables or the number of Units per Rack exceeds the specified range.
		I/O Setting Error Detection	This function detects an error when the number of Units in the registered I/O tables does not agree with the actual number of Units that is mounted, or an Interrupt Unit has been connected in the wrong position, i.e., not in slot 0 to 4.

**\*11.**Supported only by the CJ2M-CPU3□.

	Funct	ion		Description
		Program Error	Detection	This function detects errors in programs.
		Instruction Error Detec		This function detects an error when the given data value is invalid when executing an instruction, or execution of instruction between tasks was attempted.
		Indirect DM/EM BCD Error Detection         This function detects an error when an indirect DM/EM address in BCD mode is not E		
		Illegal Area Detection	Access Error	This function detects an error when an attempt is made to access an illegal area with an instruction operand.
		No END Err	or Detection	This function detects an error when there is no END instruction at the end of the program.
Self- diagnosis and Restoration	Fatal Error Detection	Task Error Detection Differentiation Overflow Error Detection Invalid Instruction Error		This function detects an error when there are no tasks that can be executed in a cycle, there is no program for a task, or the execution condition for an interrupt task was met but there is no interrupt task with the specified number.
				This function detects an error when too many differentiated instructions are entered or deleted during online editing (131,072 times or more).
				This function detects an error when an attempt is made to execute an instruction that is not defined in the system.
		User Progra Overflow Er	m Area ror Detection	This function detects an error when instruction data is stored after the last address in user program area.
		Cycle Time Exceeded Error Detection		This function monitors the cycle time (10 to 40,000 ms) and stops the operation when the set value is exceeded.
	Fatal Error	System FALS Error Detection (User-defined Fatal Error)		This function generates a fatal (FALS) error when the user-defined conditions are met in program.
	Detection (Continued from	Version Error Detection		This function detects an error when a user program includes a function that is not supported by the current unit version.
	previous page)	Memory Card T Detection	ransfer Error	This function detects an error when the automatic file transfer from Memory Card fails at startup.
	Simple Backup Function			This function collectively backs up the data in CPU Unit (user programs, parameters, and I/O memory) and internal backup data in the I/O Units.
	Unsolicited Communications			A function that allows the PLC to use Network Communications Instruction to send required FINS commands to a computer connected via a Host Link
Maintenance	Remote Programming and Monitoring		ng	Host Link communications can be used for remote programming and remote monitoring through a Controller Link, Ethernet, DeviceNet, or SYSMAC LINK Network. Communications across network layers can be performed. Controller Link or Ethernet : 8 layers DeviceNet or SYSMAC LINK : 3 layers
	Automatic Online (	Connection via	Direct Serial Connection	This function enables automatically connecting to the PLC online when the CX-Programmer is directly connected by a serial connection (peripheral (USB) port or serial port).
	Network		Via Networks	This function enables connecting the CX-Programmer online to a PLC that is connected via an EtherNet/IP network.
	Read Protection us	sing Password		This function protects reading and displaying programs and tasks using passwords. Write protection: Set using the DIP switch. Read protection: Set a password using the CX-Programmer.
Security	FINS Write Protect	ion		This function prohibits writing by using FINS commands sent over the network.
Security	Unit Name Functio	n		This function allows the users to give any names to the Units. Names are verified at online connection to prevent wrong connection
	Hardware ID Using	Lot Numbers		This function sets operation protection by identifying hardware using the user programs according to lot numbers stored in the Auxiliary Area.

# **Unit Versions**

Units	Models	Unit version
CJ2M CPU Units	CJ2M-CPU3□	CPU: Unit version 1.0 EIP : Unit version 2.0
	CJ2M-CPU1	CPU: Unit version 1.0

# **Unit Versions and Programming Devices**

The following tables show the relationship between unit versions and CX-Programmer versions.

#### **Unit Versions and Programming Devices**

		Required Programming Device		
CPU Unit	Functions	CX-Prog	Programming	
		Ver. 9.0 or lower	Ver. 9.1 or higher	Console
CJ2M-CPU UII	Functions for unit version 1.0	_	OK *1	- *2

**\*1.**CX-Programmer version 9.1 or higher is required to use CJ2M CPU Units. **\*2.**A Programming Console cannot be used with a CJ2M CPU Unit.

## **Device Type Setting**

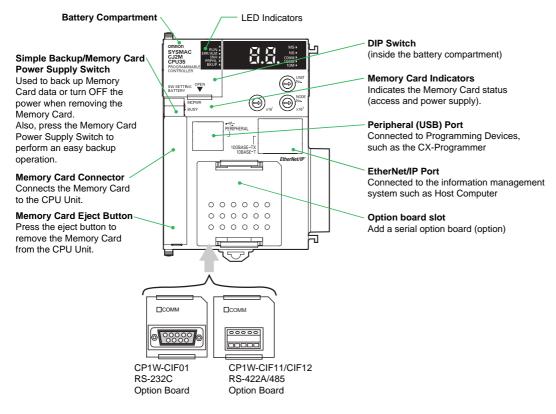

The unit version does not affect the setting made for the device type on the CX-Programmer. Select the device type as shown in the following table regardless of the unit version of the CPU Unit.

Series	CPU Unit group	CPU Unit model	Device type setting on CX-Programmer Ver. 9.1 or higher
CJ Series	CJ2M CPU Units	CJ2M-CPU3□ CJ2M-CPU1□	CJ2M

## **External Interface**

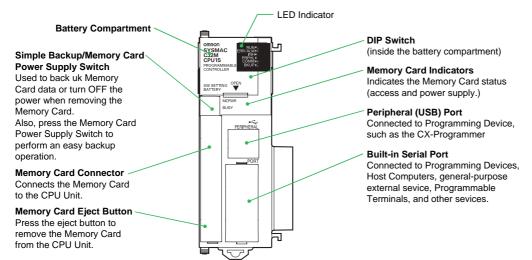

#### CJ2M-CPU3 (CJ2M with Built-in EtherNet/IP)

A CJ2M-CPU3 provides two communications ports for external interfaces: a peripheral (USB) port and an EtherNet/IP port. Serial ports can be added by mounting a Serial Communications Option Board (sold separately) in an option slot.

#### CJ2M-CPU1

A CJ2M-CPU1 provides two communications ports for external interfaces: a peripheral (USB) port and a serial port.

## Peripheral (USB) Port

Item	Specification	
Baud Rate	12 Mbps max.	
Transmission Distance	5 m max.	
Interface	USB 2.0-compliant B-type connector	
Protocol Peripheral Bus		

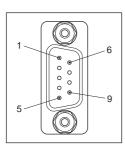

## EtherNet/IP Port

Item	Specification	
Media Access Method	CSMA/CD	
Modulation	Baseband	
Transmission Paths	Star	
Baud Rate	100 Mbps (100Base-TX)	
Transmission Media	Shielded twisted-pair (STP) cable; Categories: 5, 5e	
Transmission Distance	100 m (between hub and node)	
Number of Cascade Connections	No restrictions if switching hub is used.	
Communications CIP Communications (tag data links, Explicit Messages). FINS communications		

## Built-in Serial Port (Only CJ2M-CPU1 )

Item	Specification	
Communications method	Half duplex	
Synchronization	Start-stop	
Baud rate	0.3/0.6/1.2/2.4/4.8/9.6/19.2/38.4/57.6/115.2 kbps *	
Transmission distance 15 m max.		
Interface EIA RS-232C		
Protocol	Host Link, NT Link, 1:N, No-protocol, or Peripheral Bus	

\* Baud rates for the RS-232C are specified only up to 19.2 kbps. The CJ Series supports serial communications from 38.4 kbps to 115.2 kbps, but some computers cannot support these speeds. Lower the baud rate if necessary.

Pin No.	Signal	Name	Direction
1	FG	Protection earth	-
2	SD (TXD)	Send data	Output
3	RD (RXD)	Receive data	Input
4	RS (RTS)	Request to send	Output
5	CS (CTS)	Clear to send	Input
6	5 V	Power supply	-
7	DR (DSR)	Data set ready	Input
8	ER (DTR)	Data terminal ready	Output
9	SG (0 V)	Signal ground	-
Connector hood	FG	Protection earth	-

Note: Do not use the 5-V power from pin 6 of the RS-232C port for anything but CJ1W-CIF11 RS-422A Conversion Adapter, NT-AL001 RS-232C/ RS-422A Conversion Adapter and NV3W-M\_20L Programmable Terminal. The external device or the CPU Unit may be damaged.

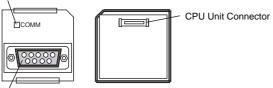

# Serial Option Board (Only CJ2M-CPU3 ) A Serial Option Board can be used with a CJ2M-CPU3 CJ2M CPU Unit.

-			
Model	Port	Maximum transmission distance	Connection method
CP1W-CIF01	One RS-232C port	15 m	Connector: D-sub, 9-pin female
CP1W-CIF11	One RS-422A/485 port (not isolated)	50 m	Terminal block: Using ferrules
CP1W-CIF12	One RS-422A/485 port (isolated)	500 m	Terminal block: Using ferrules

W472	CJ2H-CPU6⊡-EIP CJ2H-CPU6□ CJ2M-CPU□□	CJ-series CJ2 CPU Unit Hardware User's Manual	Hardware specifications for CJ2 CPU Units	Describes the following for CJ2 CPU Units: • Overview and features • Basic system configuration • Part nomenclature and functions • Mounting and setting procedure • Remedies for errors • Also refer to the Software User's Manual (W473).
W473	CJ2H-CPU6⊡-EIP CJ2H-CPU6□ CJ2M-CPU□□	CJ-series CJ2 CPU Unit Software User's Manual	Software specifications for CJ2 CPU Units	Describes the following for CJ2 CPU Units: • CPU Unit operation • Internal memory • Programming • Settings • Functions built into the CPU Unit Also refer to the Hardware User's Manual (W472)
W474	CJ2H-CPU6 CJ2H-CPU6 CJ2M-CPU3 CJ2M-CPU1 CS1G/H-CPU CS1G/H-CPU CJ1G/H-CPU H CJ1G-CPU CJ1G-CPU NSJ	CS/CJ/NSJ-series Instructions Reference Manual	Information on instructions	Describes each programming instruction in detail. Also refer to the <i>Software User's Manual</i> (W473) when you do programming.
W342	CJ2H-CPU6-EIP CJ2H-CPU6 CJ2M-CPU CS1G/H-CPU-H CS1G/H-CPU-V1 CS1D-CPU-H CS1D-CPU-S CS1W-SCU-V1 CJ1H-CPU-H-R CJ1G/H-CPU-H CJ1G-CPU-P CJ1M-CPU-P CJ1M-CPU- CJ1G-CPU- CJ1W-SCU-V1 CJ1H-X CJ1-CPU- CJ1W-SCU-V1 CP1H-X CP1H-X CP1H-X CP1-P NSJ	CS/CJ/CP/NSJ-series Communications Command Reference Manual	Information on communications for CS/CJ/CP-series CPU Units and NSJ-series Controllers	Describes C-mode commands and FINS commands Refer to this manual for a detailed description of commands for communications with the CPU Unit using C mode commands or FINS commands. <b>Note:</b> This manual describes the communications commands that are addressed to CPU Units. The communications path that is used is not relevant and can include any of the following: serial ports on CPU Units, communications ports on Serial Communications Units/Boards, and Communications Units. For communications commands addressed to Special I/O Units or CPU Bus Units, refer to the operation manual for the related Unit.
W465	CJ2H-CPU6□-EIP CJ2M-CPU3□ CS1W-EIP21 CJ1W-EIP21	CS and CJ Series EtherNet/IP Units CS1W-EIP21, CJ1W- EIP21, CJ2H-CPU6 EIP, CJ2H-CPU3 Operation Manual	Information for EtherNet/IP function of CJ2M built-in Ethernet port	Describes EtherNet/IP port/units. A basic setting, a tag data link, FINS communication, and other function are described.
W463	CXONE-AL C-V	CX-One Setup Manual	Installing software from the CX- One	Provides an overview of the CX-One FA Integrated Tool Package and describes the installation procedure.
W446		CX-Programmer Operation Manual		
W447	WS02-CXPC□-V□	CX-Programmer Operation Manual Functions Blocks/ Structured Text	Support Software for Windows computers CX-Programmer operating	Describes operating procedures for the CX-Programmer. Also refer to the Software User's Manual (W473) and Instructions Reference Manual (W474) when you do programming.
W469		CX-Programmer Operation Manual SFC Programming	procedure	P 3
W366	WS02-SIMC1-E	CS/CJ/CP/NSJ-series CX-Simulator Operation Manual	Operating procedures for CX- Simulator Simulation Support Software for Windows computers Using simulation in the CX- Programmer with CX- Programmer version 6.1 or higher	Describes the operating procedures for the CX-Simulator. When you do simulation, also refer to the CX-Programmer Operation Manual (W446), Software User's Manual (W473), and CS/CJ/NSJ series Instructions Reference Manual (W474).
W464	CXONE-AL C-V/ CXONE-AL D-V	CS/CJ/CP/NSJ-series CX-Integrator Network Configuration Software Operation Manual	Network setup and monitoring	Describes the operating procedures for the CX-Integrator.
